JEUDI 17 MARS
WINDOWS CONTAINERS

An early look at Containers with Mikhail Chatillon.

Technologies around containers have been around since the last ten years, however, they gained a huge boost of popularity in the last two years following the rise of Docker. In this session, we will describe what are containers, what are their advantages compared to full-blown VMs and how they could make the life of Developers and IT Pros in typical devops scenarios. Typical Docker and PowerShell based management on the new container system featured the next Windows Server 2016. Finally, we will look at how you can use containers in Azure to build apps and clusters.
